

Bob Jones Academy invites middle school students in the Greenville community to come see STEM in action and explore the Institute of Electrical and Electronic Engineers' MOVE truck on Saturday, Nov. 12.

What's the MOVE truck?

The MOVE truck is a drivable power and communication station that travels to areas affected by natural disasters and provides victims with temporary communication, computer and power solutions. When not deployed, the MOVE truck travels to communities demonstrating how technology is vital in helping alleviate the human impact of a natural disaster.

What will we do?

Students will learn safety measures in preparing for and recovering from natural disasters, the role of the Red Cross, how the technology found in the MOVE truck can make a difference in victims' lives and how that technology works. Students will build a battery, locate a satellite and tour the MOVE truck.

When?

Saturday, November 12

Sessions start at 9, 9:30, 10 and 10:30 a.m.

Each session lasts about 1 hour and 45 minutes.

Where?

Bob Jones Academy

1700 Wade Hampton Blvd.

Greenville, SC 29614

How much?

It's free!
